PART A-WMD ASSIGNMENT

GPN REAL ESTATE WEBSITE REPORT

1. Website Specifications

a. Objective & Goals

Gao Property Networks (GPN) is a simple, educational real-estate website designed to showcase:

- Premium residential properties (modern apartments and houses)
- Commercial skyscrapers for lease or purchase

The primary goals of the website are to:

- Present property listings clearly with minimal navigation
- Allow clients to:
 - View listings
 - Submit simulated enquiries
 - Apply for rent or purchase using forms

The system is designed to:

- Remain “stupid simple”
- Prioritize clarity, speed, and ease of use
- Work efficiently across different devices
- **Use a web structure** so users access each page from all the pages

b. Target Audience

Gao Property Networks (GPN) serves two main user groups:

- **Mid- to high-income individuals** who want to rent or buy modern apartments and houses
- **Companies and businesses** that aim to lease space in commercial skyscrapers for offices or operations

c. Type of Website

Classification

- Educational (Demo) Website

- Static website built using HTML, CSS, and JavaScript
- Front-end only system with no backend

This website does not store any data permanently. It runs entirely on the client side. User interaction is simulated for demonstration purposes

Main features include:

- Form submissions (enquiries/applications)
- Property search functionality

Scope and Constraints

3–4 main pages:

- Home
- Properties
- Blog
- Contact
- About

The website is designed for academic use only, so all data is simulated and not connected to any database or server.

- No backend or authentication system
- Uses placeholder images for visuals
- Includes a simple homepage image slider

2. Information Design & Taxonomy

Site Map (Minimal Navigation)

User Journeys

Client path: Home → Properties → Contact us → Fill contact form (To enquire asset).

Quick path: Home → Contact us to send a short enquiry.

Content Organization & Labels

- Content is organized into consistent regions:
- header
- main content
- footer

Navigation labels are short and clear (Home, Properties, Blog, About us, Contact).

Property cards always display an image, title, type, beds, location. Filters use unambiguous terms (Apartment, House, Commercial).

3. Page Template Design

Page templates or wireframes are simple visual layouts that show the structure of a webpage without focusing on design details. They

- Are used to plan how content and elements will be arranged before full development.
- Focus on structure rather than visual design
- Show placement of elements like text, images, and navigation
- Help improve layout and user flow

As stated, "The best wireframe style is no style... all they see is structure. This forces viewers to debate the arrangement of elements, rather than how they will look." — Fresh Consulting.

1. Home Page Template

The Home page:

- Introduces the website
- Provides a clear starting point for visitors.
- It includes a welcoming headline,
- A brief overview of the property's offerings
- Navigation links to key sections of the site.

Visual elements such as banners or featured images may be included to represent the brand.

The page sets the overall tone and directs users to major categories such as Properties, About Us, Blog, and Contact Us.

2. Properties Page Template

APARTMENTS

COMERCIAL BUILDINGS

MORDEN HOMES

X: 913 px Y: 160 px

The Properties page presents the main categories of available real-estate properties. It organizes the offerings into three sections:

a. Apartments

This section displays available rental apartments with basic descriptions, images, and key details such as size, layout, and general features.

b. Commercial Properties

This section includes commercial buildings suitable for business use. Each property contains brief descriptions and relevant information about the space.

c. Modern Houses

This section highlights modern residential houses with images and short descriptions summarizing their design features.

3. About Us Page Template

The About Us page:

Provides background information about the organization.

It highlights the mission, values, and purpose of the business through the following sections:

a. Our Mission and Vision

A statement outlining:

- The organization's goals
- Long-term direction and commitment to serving clients.

b. Executive Staff

A brief introduction to key staff members or leadership, focusing on their roles and contributions.

c. Testimonials/Feedback

A section dedicated to customer comments, testimonials, or general feedback from users.

4. Blog Page Template

Medium length hero headline

Lorem ipsum dolor sit amet et delectus
accommodare his consul copiosae legendos at vix
ad putent delectus delicata usu. Vidit dissentiet eos
cu eum an brute copiosae hendrerit.

The Blog page serves as an information hub where visitors can read updates, articles, or announcements. It consists of a single section:

a. All Posts

A collection of blog entries presented in chronological or thematic order. Each post includes a title, summary, and link to the full article.

Privacy Policy

Terms of Service

The Contact Us page provides essential communication channels for users wishing to reach the organization. It contains three main elements:

a. Contact Form

A simple form that collects basic user information and messages.

b. Map

A visual map displaying the business location for easy reference.

c. Email and Phone Number

Direct contact details for enquiries or support.

4. Technical Brief

Stack & Rationale

- HTML5 for semantic structure and accessibility.
- CSS3 (Flexbox/Grid) for responsive layouts that scale from mobile to desktop.
- Vanilla JavaScript for client-side interactions:
 - a lightweight image slider
 - property filtering/search
 - simulated data handling applications.
- Simulated Data Handling
 - Client applications/enquiries will be simulated on the front end so that users may be able to fill the form and use the search bar.

5. Quality Assurance

Usability & Accessibility

- The website maintains a clear visual hierarchy supported by **readable typography and appropriate colour contrast to enhance user experience.**
- All interactive elements include visible focus states to support keyboard navigation.
- Forms are designed with descriptive labels ,meaningful placeholders ,basic validation to prevent errors during submission.

These measures ensure the site remains accessible, user-friendly, and compliant with standard usability principles.

Responsiveness

To ensures the website remains responsive and usable across all screen sizes, the website has following qualities;

- Mobile-first design approach used
- Layouts are designed for small screens first, then scale up for larger devices
- Card grids automatically adjust based on screen width:
 - 1 column on small screens
 - 2 columns on medium screens
 - 3 columns on large screens
- Slider images use proper object-fit and cropping
- This keeps images visually stable across different devices

Functional Checks

- The website was tested in different browsers e,g chrome and Microsoft edge.
- Performance Considerations;
 - Optimized images and minimal external assets are used to improve loading efficiency.
 - JavaScript is kept lightweight to ensure a fast initial page load and smooth user interactions throughout the site.

These measures collectively contribute to better overall performance and a more responsive user experience.

6. Publishing & Promotion

a. Publishing (Demo Approach)

- The website is hosted on a simple, student-friendly platform that provides a single shareable link for assessors.
- The project uses a basic structure consisting of HTML pages, a CSS file, a JavaScript file, and an assets folder.

b. Basic Promotion (Educational Context)

- A short title and description are prepared highlighting “Modern Apartments, Houses, and Commercial Spaces.”
- A clean preview image is added for link sharing, and the demo link is distributed through class or academic channels.

7. Future Developments

- Secondary Users:** Real Estate agents will be added as secondary users so that they can be the one adding properties.
- Backend & Database:** Real user accounts, agent profiles, and persistent property/application records.

- c. **Authentication & Roles:** Separate dashboards for Admin, Agent, and Client.
- d. **Media Handling:** Secure image uploads, processing, and CDN delivery.
- e. **Advanced Search:** Filters by availability dates, neighbourhoods, amenities, and map-based search.
- f. **Payments & Booking:** Reservation/application fees and viewing appointment scheduling.
- g. **Notifications:** Email/SMS updates for enquiries, approvals, and status changes.
- h. **Analytics:** Dashboards for leads, views, conversions, and property performance.

8. Conclusion

The website successfully demonstrates the basic principles of web development. Although it does not include a backend, it effectively simulates real-world functionality and provides a good user experience.

THE END
